Bring Eye Screenings Directly to Your Practice

Buckeye's Mobile Health Unit (Maxwell) can meet eligible members where they already receive care to close care gaps for the eye exams for patients with diabetes (EED) measure.

WHAT THE MOBILE UNIT PROVIDES

- **Retinal images of both eyes** using a handheld RetinaVue camera
- **No dilation drops** natural dilation in a darkened room for 5–10 minutes
- **Fast imaging** approximately 20-30 seconds per eye
- **Professional interpretation** images are securely uploaded and read by an eye-care professional
- **Results returned to the PCP** supporting follow-up and EED care-gap closure

Convenient, on-site retinal imaging

HOW A PROVIDER-OFFICE SCREENING DAY WORKS

1 Identify

Buckeye members due for EED screening

2 Reserve

a date that fits your office workflow

3 Schedule

patients into dedicated or existing visits

4 Host

Buckeye brings the unit, equipment and trained operator

5 Receive

screening reports for follow-up and referrals

buckeye health plan

READY TO PARTNER? Contact your Buckeye Quality Team Member to discuss member identification, scheduling and an on-site screening date.

Note: *Retinal imaging that is provided on the mobile unit, is a screening of the retina and does not replace a comprehensive eye exam.*
