

CERVICAL CANCER DOESN'T WAIT.

You shouldn't either.

Take a few minutes.
It could save your life!

A cervical cancer screening could save your life.

Screening leads to fewer deaths.

Screenings find cervical cancer before it turns into cancer

Deaths have decreased by 75% from screenings

of women who receive an early-stage cancer diagnosis survive

Hesitant to make an appointment?

You're not alone.

You may feel:

- Embarrassed or uncomfortable prior to the screening
- Too busy to find time to make and keep your appointment
- Not concerned about your risk of cervical cancer

Screenings are important:

- Screenings last only a few minutes
- Cervical cancer can occur at any age

Who should get screened?

Women age 21 to 64

If you've never had a screening, it's easy to start

More than **50%** of cervical cancer cases are found among women who have never or seldom been screened.

SCHEDULE YOUR SCREENING TODAY!

When should you get screened?

Members, age 21-64, earn rewards for getting a pap smear at least every three years*

** If you have certain risk factors, your doctor may recommend more-frequent Pap smears. Women 30 to 65 should also be screened every 5 years for high-risk human papillomavirus (HPV). Some women need a different screening schedule because of their health history or risk factors. Talk to your doctor about when you should get tested.*
